

ReShape® Dual Weight Loss Balloon

ReShape jump starts your weight loss by placing two connected saline-filled gastric balloons, made of medical-grade silicone, inside your stomach for six months. The weight loss balloon takes up room in your stomach so there's less space for food and you feel full faster.

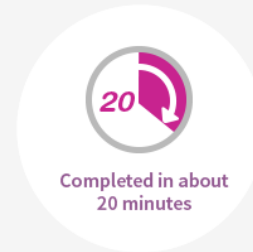

How It Works

With *ReShape*, your doctor will gently insert the weight loss balloons through your mouth (endoscopically), with no incisions or scars

Unlike weight loss surgeries, *ReShape* is not a permanent implant and does not permanently reroute your digestive system

Insertion of the gastric balloon is completed in about 20 minutes, with no hospital stay required; you can get in and out and on your way to weight loss

Dual Balloon. Single Procedure.

- A larger capacity than other weight loss balloon systems, taking up more space in your stomach.
- Inserted in a single procedure with no x-rays required.
- Prioritizes safety by minimizing the risk of migration.
- Improves comfort by conforming to the natural shape your stomach.

How it works.

- With *ReShape*, your doctor will gently insert the weight loss balloons through your mouth (endoscopically), with no incisions or scars.
- Unlike weight loss surgeries, *ReShape* is not a permanent implant and does not permanently reroute your digestive system.
- Insertion of the gastric balloon is completed in about 20 minutes, with no hospital stay required; you can get in and out and on your way to weight loss.
